About Us

Clary Corporation is a 65 year old company that began its existence as a high-tech manufacturing company building aircraft parts for the war effort. As time progressed and as the war wound down Clary began manufacturing gyroscopic device for military missile programs, portable computer devices and mechanical adding machines. In the late 80s Clary designed the first all solid state Uninterruptible Power Systems (UPS) for the power industry. This new system incorporated the latest solid-state devices to develop the first all solid-state UPS. Clary later refined its' solid state technology and added all digital technology to define the rugged devices it manufactures today. Clary UPS systems are designed to go where others fail and are known world wide for their extreme temperature capability and rugged reliable design.
