Pelco’s ES40/ES41 Esprit® SE Positioning System features a receiver, pan/tilt, enclosure, and either an Integrated Optics Package (IOP) or a pressurized Integrated Optics Cartridge (IOC) in a single, easy-to-install system. Options include IOP or IOC models with or without wiper.

For a wide range of applications, the ES40/ES41 Series offers a high resolution, color/black-white camera (540 TVL) with an infrared cut filter, 432X zoom (36X optical, 12X digital), electronic image stabilization, and wide dynamic range. A powder-coated, aluminum construction makes the ES40/ES41 Series ideal for either indoor or outdoor applications. The system has an absolute operating temperature range of –45° to 50°C (–50° to 122°F). Within two hours after power-up, the entire unit can de-ice and be operational from a temperature of –25°C (–13°F).

The ES40/ES41 Series variable pan and tilt speeds range from 0.1 to 40 degrees per second in manual pan mode, and 0.1 to 20 degrees per second in manual tilt. Pan preset and turbo speeds are 100 degrees per second in wind speeds of 80 kph (50 mph) and 50 degrees per second in the 145 kph (90 mph) wind-speed profile. Tilt preset speed is 30 degrees per second. The ES40/ES41 Series is capable of 360 degrees of continuous pan rotation. The tilt range allows for horizontal viewing of +36° to –85°. There are 256 configurable preset positions with a preset accuracy of 0.1 degree.

The ES40P/ES41P system’s IOC contains dry nitrogen pressurized to 10 psig, which protects the environment inside the cartridge eliminating internal condensation and corrosion. Sensors strategically placed in the cartridge send an “Alert” message if changes in pressure, temperature, and humidity are beyond factory-set acceptable limits. The sensors also allow for instant on-screen display of temperature, pressure, and dew point. The IOC is factory assembled and installed in the ES40P/ES41P systems. All labor intensive procedures of setting up the camera, lens and charging the unit with dry nitrogen are eliminated. The miniature size of the cartridge decreases the future need for maintenance and increases the overall reliability of the pressurized unit.

The ES41 Series includes a window wiper. The wiper is completely integrated into the enclosure and does not interfere with the viewing range of the system. The wiper can be configured to delay between wipes and to automatically shut off after a specified period. The wiper design also allows for easy replacement of the wiper blade. A built-in heater, window defroster/defogger, sun shroud, and insulation blanket are standard features on the ES40/ES41 units, which also include open collector auxiliary outputs that function for two seconds before deactivating.

The systems are available with an input voltage of 24 VAC or with a selectable power source of 120/230 VAC. The ES40/ES41 Series also has a power-up recovery mode that allows the user to specify what operation the system will resume whenever the power is cycled.
