

Purpose

This procedure quickly resets $Autoscope^{\text{(B)}}$ equipment to its factory default configuration. The process is helpful when installing a spare unit, after upgrading new $Terra^{\text{TM}}$ Technology units to new software versions, or in training exercises.

Introduction

Many times, it becomes necessary to reset an *Autoscope* device to its default configuration, just like a new unit out-of-the-box from the factory. For example, this is a good procedure to start the *Terra* Access Point (TAP DPM)¹ auto learn when the TAP was previously programmed.

Briefly, the Software Installer provides an [Advanced...] option to reset the device to its Factory Default Configuration. The process takes only 1 or 2 minutes. You can reset more than one device at the same time.

Application

- 1. In Network Browser, select the unit or multiple units.
- 2. Choose "Install Software."

¹ TAP DPM = *Terra* Access Point Detector Port Master
